                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to compounds modulating CD59 mediated complement CC activity. It provides (1) molecules structurally mimicking human CD59 cC amino acid residues 42-88 (region which serves as binding site for CD59 cC inhibit the formation of the human C5b9 occupies. These mimetics cC specifically bind to amino acid residues 359-384 of human C9. (1i) cC in a spatial orientation which can promote the formation of the C5b-9 cmplex. CD59 cmplex. CD59 cmplex. CD59 cmplex. CD59 cmplex. CD59 cmplex assembly. This is especially useful in cC immune disorders and diseases such as immunovasculitis, rheumatoid cC c5b-9 complex assembly. This is useful in pattents in need of suppression of complement-mediated inflammation, e.g. crarthritis, scleroderma. Compounds that mimic C9 can be used to promote complex assembly. This is useful in pattents in need of complement composition can be administered as an adjunct to tumour vy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

The invention relates to compounds modulating CD59 mediated complement activity. It provides (1) molecules structurally mimicking human CD59 amino acid residues 42-58 (region which serves as binding site for CD59 interactions) when they are in a spatial orientation which can inhibit the formation of the human C55-9 complex. These mimetics specifically bind to amino acid residues 359-384 of human C9. (ii)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8888888888x&
Amino acid residues 359-384 of human complement C9 are critical for binding CD59 to C9, resulting in inhibition of C5b-9 complex assembly. Peptides that mimic this human C9-derived peptide sequence, and antibodies raised against such peptides, can be used to modulate binding of CD59 to C9. The peptides bind to endogenous CD59 to prevent the CD59 from inhibiting assembly of the C5b-9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches

Compounds that mimic CD59 can be used to increase CD59 patients in need of suppression of complement-mediated inflammation, e.g. inmune disorders and diseases such as immunovasculitis, rheumatoid arthritis, scleroderma. Compounds that mimic C9 can be used to promote activation. The composition can be administered as an adjunct to tumour therapy. The present sequence represents a human C9 protein fragment.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RESULT
                                 cc activity. It provides (i) molecules structurally mimicking human CD59 camino acid residues 42-58 (region which serves as binding site for CD59 cc -09 interactions) when they are in a spatial orientation which can cc inhibit the formation of the human C5b-9 complex. These mimetics specifically bind to amino acid residues 359-384 of human C9. (ii) complexity bind to amino acid residues 359-384 of human C9. (ii) complexity bind to amino acid residues 359-384 of human C9. (ii) complexity bind to amino acid residues 359-384 when they are complex. Compounds that mimic C9 amino acids 359-384 when they are cc in a spatial orientation which can promote the formation of the C5b-9 cc inhibition of C5b-9 complex assembly. This is especially useful in C9 atients in need of suppression of complement-mediated inflammation, e.g. cimmune disorders and diseases such as immunovasculitis, rheumatoid carthritis, scleroderma. Compounds that mimic C9 can be used to promote c5b-9 complex assembly. This is useful in patients in need of complement activation. The composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an adjunct to tumour composition can be administered as an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

                                                                                                         A polypeptide (AAW18311) comprises rabbit complement C9. Chimeric proteins were constructed in which the segment of C9 corresponding to the putative CD59 binding site were interchanged between rabbit and human C9 (see also AAW18310). These were tested for haemolytic activity and for sensitivity to inhibition by membrane CD59. Substn. of human C9 residues 334-415 into rabbit C9 resulted in a protein that was indistinguishable from human C9 in its sensitivity to inhibition by CD59. When this same segment of human C9 was replaced by the corresponding rabbit sequence (aa339-424), the chimera was indistinguishable from rabbit C9 and was virtually unaffected by the presence of membrane CD59.
                                                                                                                                                                                                                                                                                           Modulating binding of CD59 to C9 complement component that mimics or binds the C9-specific motif, used to activate complement in tumour therapy or to treat complement mediated

CC detoxifying fumonisin or a structurally related mycotoxin present in CC during processing, or to application to a plant or to harvested grain or a structurally related mycotoxin present in CC during processing, or to processed grain that is to be used as animal CC into microorganisms that multiply on plants to the present CC into microorganisms that multiply on plants to deliver enzymes to CC introduced via a vector into a microbial host and the transformed host CC introduced via a vector into a microbial host and the transformed host CC invention are fermented in a bacterial host and the resulting the CC is supplied to the environment, plants or animals for reducing the CC invention are fermented in a bacterial host and the resulting bacteria CC can be used alone or in combination to engineer microbes or other CC crossisms to metabolise fumonisin and resist its toxic effects.

                                                                                                                                                                                                                      polypeptide receptor 2. The polypeptides and their associated nucleic acids are useful for identification of variant sequences and detection candidate compounds capable of binding the molecules. The sequences of the invention can be used in the treatment and diagnosis of various disorders including cardiovascular diseases such as arteriosclerosis, myocardial infarction and coronary arterial thrombosis, renal diseases such as diabetic nephropathy, muscular diseases such as hypertrophy, lamune disorders such as immune complex nephritis, multiple sclerosis, and the properties of the property of the pro
                                                                                                                                                                                                                                                                                                                                                                                                                            The sequence represents an angiotensin converting enzyme splice variant (ACEV) polypeptide. The polypeptides of the invention include variants of granulocyte colony stimulating factor receptor, glucagon, interleukin 6, platelet-derived endothelial cell growth factor, cyclin-dependent kinase inhibitor 10, cellular tumour antigen P53, and vasoactive intestinal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel alternative splicing variants e.g. variant of angiotensin converting enzyme (ACEV), useful in identifying candidate compounds capable of binding to the variant and to detect anti-variant antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    vasoactive intestinal polypeptide receptor 2; arteriosclerosis; cancer; myocardial infarction; coronary arterial thrombosis; renal disease; diabetic nephropathy; muscular disease; immune disorder; sarcoidosis; multiple sclerosis; immune complex nephritis; deep vein thrombosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Angiotensin converting enzyme splice variant; ACEV; interleukin b; granulocyte colony stimulating factor receptor; glucagon; hypertrophy; platelet-derived endothelial cell growth factor; cardiovascular disease; cellular tumour antigen P53; cyclin-dependent kinase inhibitor 1C;
                                                                                                                                                                         cancer, sarcoidosis, nonarcoidotic pulmonary granulomatous diseases as asbestosis and vascular pathologies involving an endothelial
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     nonarcoidotic pulmonary granulomatous vascular disorder; asbestosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAU02929

ARB54466. The human pancreatic cancer antigens, given in ARB54008 to neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammatory activities, and can be used preventing, treating, or ameliorating a medical condition or in assays subject. Binding partners to the proteins and the activity to one in a proteins can be identified. The pancreatic cancer antigens can be used to detect, treat or prevent pancreatic disorders, especially cancer. Agonists and antagonists to the antigens can be screened for The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

                                                                                                                            AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      pancreatic cancer antigen polynucleotides can be used to design nucleic acid hybridisation probes that can be used in chromosome mapping, linkage analysis, tissue identification and/or typing and a variety of forensic and diagnostic methods. The proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal or proliferative disorders. AAC99232 to AAC99240 and AAB54467 represent
                         inactive proteins or to supplement the patients own production of P., Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnos

2:
   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               DB

S32677
nitrogenase cofactor synthesis protein nifs - Anabaena variabilis (fragment)
N;Contains: L-cysteine sulfurtransferase (EC 2.8.1.-)
C;Species: Anabaena variabilis
C;Accession: S32677
R;Monnerjahn, U.; Boehme, H.
Submitted to the EMBL Data Library, December 1992
A;Description: Cloning and expression in E. coli of the Anabaena.
A;Accession: S32677
A;Accession: S32677
A;Accession: S32677
A;Accession: S32677
A;Cession: S32677
A;Accession: S32677
                                                                                                                                                                                                                                                                                                                                                                                                    R;Volknandt, W.; Pevsner, J.; Elferink, L.A.; Scheller, R.H.
FEBS Lett. 317, 53-56, 1993
A;Title: Association of three small GTP-binding proteins with cholinergic synaptic vesi.
A;Reference number: S29485; MUID:93154521

H+transporting ATP synthase (EC 3.6.1.34) gamma chain, mitochondrial - mouse (fragment) C.Speciles: Mus musculus (house mouse) C.Accession: Pr0095
R.Kawakami, T.; Uchida, T.; Sakai, T.; Kamo, M.; Morimasa, T.; Tsugita, A. A. PDescription: Proteome analysis of mouse brain.
A.Pescription: Proteome analysis of mouse brain.
A.Reference number: Pr0091
A.Accession: Pr0095
A.Molecule type: Protein
A.Residues: 1-15 <KAWA
A.Experimental source: brain, striatum C.Keywords: hydrolase; mitochondrion

  Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Score

Tsolation of a peptide containing a histidinyl-cysteinyl sequence from the active center of transaldolase.";

Arch. Biochem. Biophys. 167:525-533 (1975).

-i. FUNCTION: TRANSALDOLASE IS IMPORTANT FOR THE BALANCE OF METABOLITES IN THE PENTOSE-PHOSPHATE PATHWAY.

-i. CATALYTIC ACTIVITY: SEDOHEPPULOSE 7-PHOSPHATE + D-GLYCERALDEHYDE 3-PHOSPHATE = D-ERYTHROSE 4-PHOSPHATE + D-FRUCTOSE 6-PHOSPHATE.

-i. PATHWAY: NONOXYDATIVE PART OF THE PENTOSE-PHOSPHATE PATHWAY.

-i. SIMILARITY: BELONGS TO THE TRANSALDOLASE FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   15-JUL-1999 (Rel. 38, Created)

-!- FUNCTION: TRANSALDOLASE IS IMPORTANT FOR THE BALANCE OF
METABOLITES IN THE PENTOSE-PHOSPHATE PATHWAY.
-!- CATALYTIC ACTIVITY: SEDOHEPTULOSE 7-PHOSPHATE + D-GLYCERALDEHYDE
-!- CATALYTIC B- D-ERYTHROSE 4-PHOSPHATE + D-FRUCTOSE 6-PHOSPHATE.
-!- PATHWAY: NONOXYDATIVE PART OF THE PENTOSE-PHOSPHATE PATHWAY.
-!- STMILARITY: BELONGS TO THE TRANSALDOLASE FAMILY.
